

Individual reflection 5

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

While I have a strong desire to expand my knowledge of effectively implementing patterns and principles, my primary focus lies in enhancing my ability to handle time pressure. The time constrained of a one-week sprint demands efficient completion of tasks without compromising quality. Therefore, I want to explore various techniques and methods to effectively navigate and manage time pressure.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have contributed with the help of changing the way flashcards are scored. Instead of clicking a button, so that a alert box occurs, instead the way it works, is that a like and a dislike button is shown whenever the answer is revealed. Then one can judge whether the person were right or not, clicking the appropriate like or dislike button. I have merged and made sure that things work nicely together as well. Next time I can help the team by maybe making sure my work is done a bit earlier, or learn to call for help, when it is needed.

Changes/improvements from last week's reflection?

Not so many changes, but some improvements were done, better communication and more productive work towards the sprint goal.
