

## **Individual reflection 2**

What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

I feel like I have gotten better at teamwork within the teams we create during the sprint, but not yet so good between the small teams within the team. For example, if I and someone else is working on a specific part of the code, and two others on another thing, we usually are not communicating about our needs or problems until the end of the sprint, which is something I want to change. I want the communication to be more transparent. And I still want to learn firebase, I haven't had the chance to work on it yet. So im still eager to learn it.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

This sprint I delivered a couple of things, first of the the hint feature to the quiz application. There are now different kinds of hints that can be used depending on the quiz type that is created. I have also worked on creating the score system for the flashcards. After you have revealed the answer now, you can judge whether you deserve a point or not.

And as I've mentioned before, by I can help the team more, by being more transparent. Not just me, but everyone in the team.

Changes/improvements from last week's reflection?

The outlining of the work items are now much clearer. Now everyone knows more exactly what the other "subteams" are doing within the team. Before, it was unclear what the two others really were working on.
