Individual Reflections

Week 1:

- What do I want to learn or understand better? Consider e.g. teamwork, Scrum, agile processes, technologies etc?

When it comes to working agile and in an iterative and incremental way, I want to learn what is the best approach in handling changes of planning. Since one of the aspects of working agile is being adaptive to changes, what would be the best way to be prepared both in technical aspects such as coding and in teamwork.

On the subject of teamwork, I believe there have been many instances where we as a group might be talking about the same idea but not thinking the same. Which caused us to go through each idea again. I would like to improve in communication so such problems do not occur or at least reduce them.

About technologies as of now I would like to learn about Firebase and its use and implementation in a software project.

- What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

My contribution towards the team's goal this week has been to work with one other of my team members Omar, on one of the core features of the application. The multi choice feature will make it possible for the user to be able to create such questions, which can be used later on for studying and as quiz questions.

- Changes/improvements from last week's reflection?

No changes//improvements since this is the first sprint
